

## Message from the President

### As innovators with a strong ethical foundation, you are going forth from Nagoya into the world.

What you are going to do at this University is not only acquire knowledge but also get out of the classroom and apply what you would have just learned to propose a way to solve the real challenges in society, working with active trailblazers in business or community. That is your story. And you are the main character improving social issues.

Our mission is to provide the students with professional skills and knowledge in Information Technology or Digital Entertainment and bring them up into true innovators. The pioneers are supposed to tackle the existing challenges in society and identify the potential problems for the future. Learn at the International Professional University of Technology in Nagoya and train yourself through the learning in the classroom and the authentic experiences in our society.

I'm proud that the world is looking to Nagoya as a treasure-trove of Japanese technology. With the wind at your back, you will learn through the novel curriculum, including Community-based Practical Design Training and Company Internships, which no other universities offer, and gain creativity, practical skills, and business acumen. Fly into the world from downtown Nagoya.

"Designers in Society" is the name we give to the innovators we develop at this University.

They will create new values for society and design the physical items, systems, and mechanisms needed to make these values a reality. Through the process design and the following work, these innovators will contribute to social transformation and thus redesign society itself.

From this new form of university, may they go forth into the world with a new kind of knowledge.
